

HFMEA- Internal TeleStroke

Presented by Stroke Team

TriHealth

Be seen. Be heard. Be healed.™

TEAM WORK

Coming together is the
beginning

Keeping together is
progress

Working together is
success

Healthcare Failure Mode Effect Analysis (HFMEA)

Structured way to identify and address potential problems, or failures and their resulting effects on the system or process before an adverse event occurs.

Helps identify bottlenecks or unintended consequences prior to implementation.

Wins with completing FMEA Process

- Provided our clinical teams an avenue to work collaboratively together to gain consensus on the tele stroke process.
- Identified opportunities where processes weren't well defined, forcing communication and alignment.
- Transparency of the process.
- Gained confidence in the process change.
- Team members engaged and invested in the change.

Why Change to Internal Tele Stroke Process?

Improved patient outcomes

Improved treatment times for patients suffering neurologic emergencies including strokes

Improved door to thrombolytic times

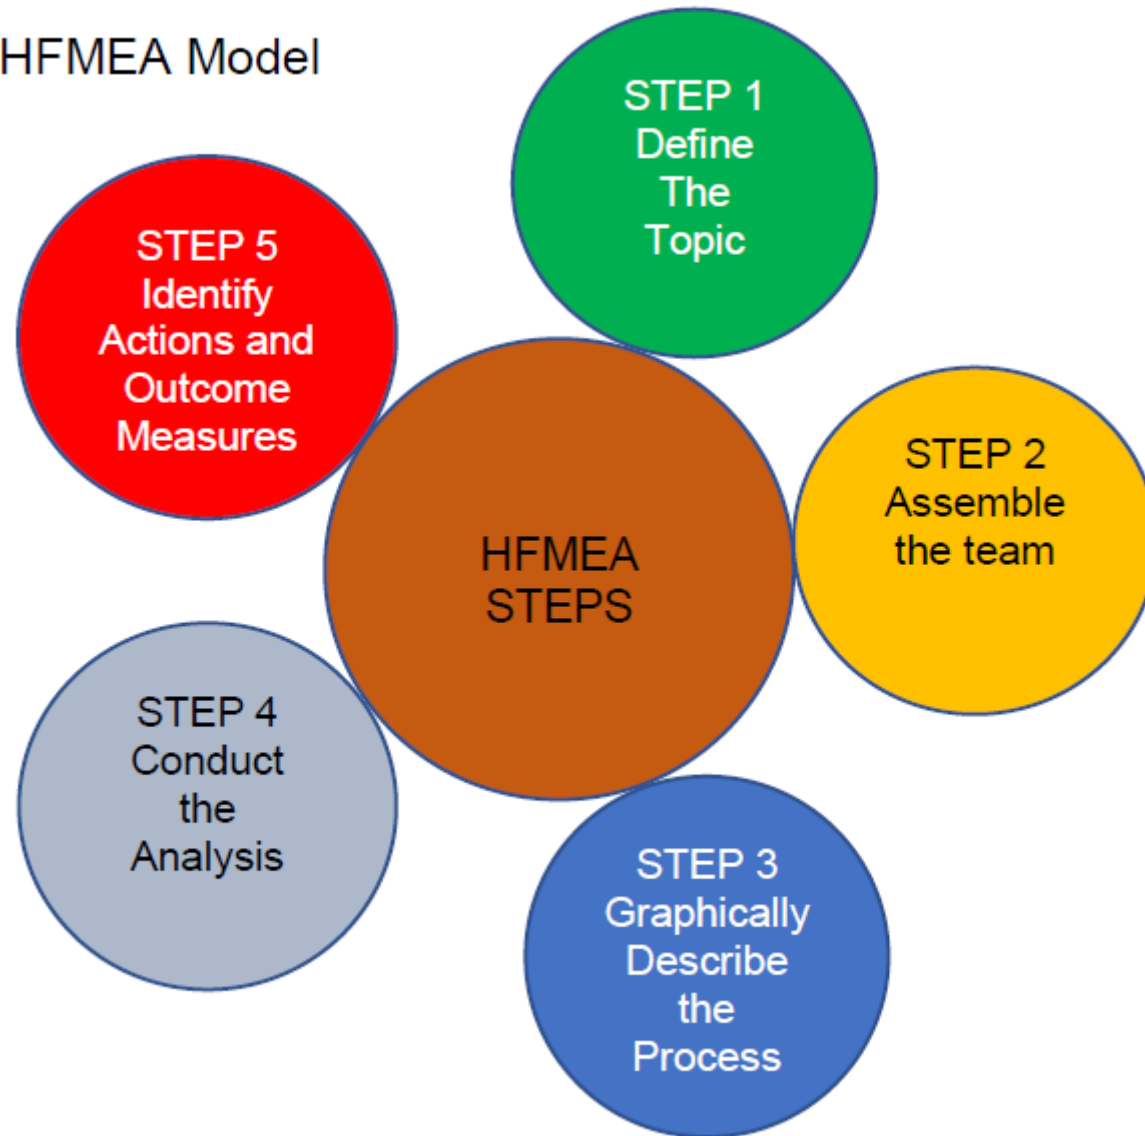

Improved endovascular times for thrombectomy

Provides complex stroke care to the community offering expedited transfers to a highest level of stroke care at the GS comprehensive stroke center

HFMEA Model

Step 1 Define the Topic

Phase 1- Internal Tele-Stroke Process

- Provide teleconsultation between TriHealth Neuro Critical Care Intensivists and the care team and patient with suspected stroke at:
- **TriHealth ED's and Inpatient Units**
 - McCullough Hyde Memorial Hospital
 - Bethesda Arrow Springs
 - Western Ridge
 - Bethesda North Hospital
 - Bethesda Butler Hospital
 - Good Samaritan Hospital

Step 2 Assemble the Team

Multidisciplinary Team

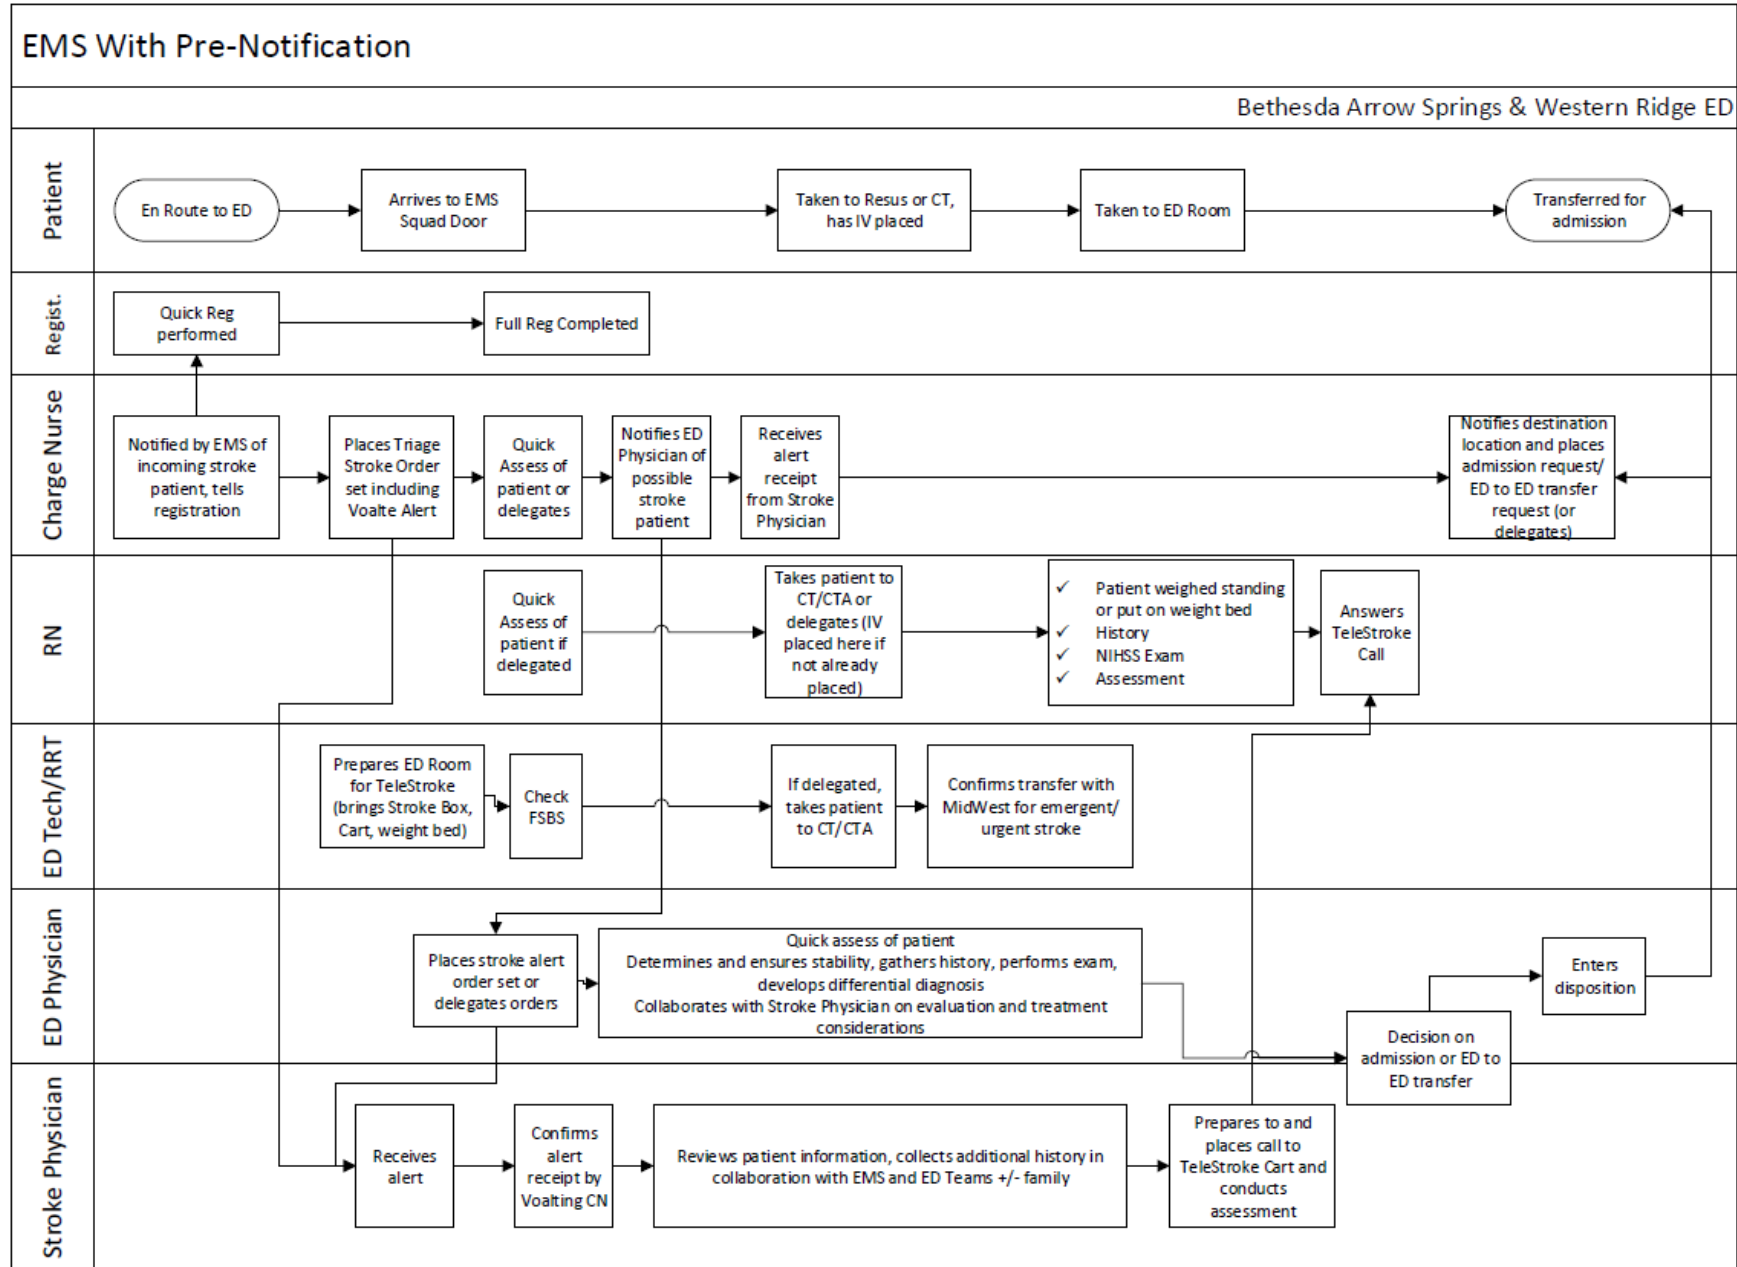

| | | | | |
|---|--------------------------------|---------------------------------|---|--|
| Project lead- Morgan Black | Lori Greiser, MSN, RN, CNOR | Kim Schmeusser, MSN, RN, CEN | Maria Ashdown, Vice President, Chief Nursing Officer | Dr. Zammit, Medical Director Stroke |
| Jennifer Rainer, VP Quality and Safety | Stroke Team | IT | Security | Operators |
| Physicians | Leadership | ICU Administration | Inpatient Teams- all sites represented | Emergency Room Teams-all sites represented |

Step 3 Describe the Process

Overview of the work

- 6 TriHealth Locations, 6 ED's, 4 ICU's, 22 workflows completed
 - 6 Emergency Departments
 - Western Ridge
 - Arrow Springs
 - MHMH
 - Bethesda Butler
 - Bethesda North
 - Good Samaritan
 - 4 Inpatient Units (providing care to all inpatient units)
 - MHMH
 - Bethesda Butler
 - Bethesda North
 - Good Samaritan
- 75 hours of working meetings formulating and revising

TeleStroke WR and AS ED Workflow

Hazard Analysis

- Step 1: Identify and list the potential failure modes for each subprocess steps within the overall process
- Step 2: Determine the Severity and Probability of the potential failure mode and record these on the HFMEA Worksheet.
- Step 3: Use the HFMEA Decision Tree to determine if the failure mode warrants further action.

Appendix C. Severity Rating

| | Patient Outcome | Visitor Outcome | Staff Outcome | Equipment or Facility |
|-------------------------------|--|---|--|--|
| Catastrophic Event (4) | ^{a, b} Death, major permanent loss of function, suicide, rape, hemolytic transfusion reaction, surgery or procedure on the wrong patient or wrong body part | Death; or hospitalization of 3 or more visitors | A death or hospitalization of 3 or more staff | Damage equal to or more than \$250,000. Any fire that grows larger than an incipient stage |
| Major Event (3) | ^a Permanent lessening of bodily function, disfigurement, surgical intervention, increased length of stay or level of care for 3 or more patients | Hospitalization of 1-2 visitors | Hospitalization of 1-2 staff, 3 or more staff with lost time or restricted duty injuries/illnesses | ^c Damage equal to or more than \$100,000. |
| Moderate Event (2) | Increased length of stay or increased level of care for 1 or 2 patients | Evaluation and treatment for 1-2 visitors (less than hospitalization) | Medical expenses, lost time or restricted duty injuries or illness for 1-2 staff | Damage more than \$10,000 but less than \$100,000. A fire at incipient stage or smaller |
| Minor Event (1) | No injury, nor increased length of stay nor increased level of care | Visitor evaluated (no treatment or treatment refused) | First aid only (no lost time, restricted duty injuries or illnesses) | ^{c, d} Damage less than \$10,000. Loss of utility system with no adverse outcome. |

Appendix D. Probability Rating

| HFMEA Probability Ratings |
|--|
| Frequent Event (4) Likely to occur immediately or within a short period (may happen several times in one year) |
| Occasional Event (3) Probably will occur (may happen several times in 1 to 2 years) |
| Uncommon Event (2) Possible to occur (may happen sometime in 2 to 5 years) |
| Remote Event (1) Unlikely to occur (may happen sometime in 5 to 30 years) |

| HFMEA Hazard Matrix | | | | |
|---------------------|-----------|--------------|-----------|------------------|
| Severity of Effect | | | | |
| | Minor (1) | Moderate (2) | Major (3) | Catastrophic (4) |
| Frequent (4) | 4 | 8 | 12 | 16 |
| Occasional (3) | 3 | 6 | 9 | 12 |
| Uncommon (2) | 2 | 4 | 6 | 8 |
| Remote (1) | 1 | 2 | 3 | 4 |

Step 5- Actions and Outcome Measures

Step 1: Identify the type of action to take:

- 1a. Eliminate - prevent all future occurrences by removing the failure point.
- 1b. Control - minimize all future occurrences by implementing mitigating factors.
- 1c. Accept - acknowledge and accept known risks.

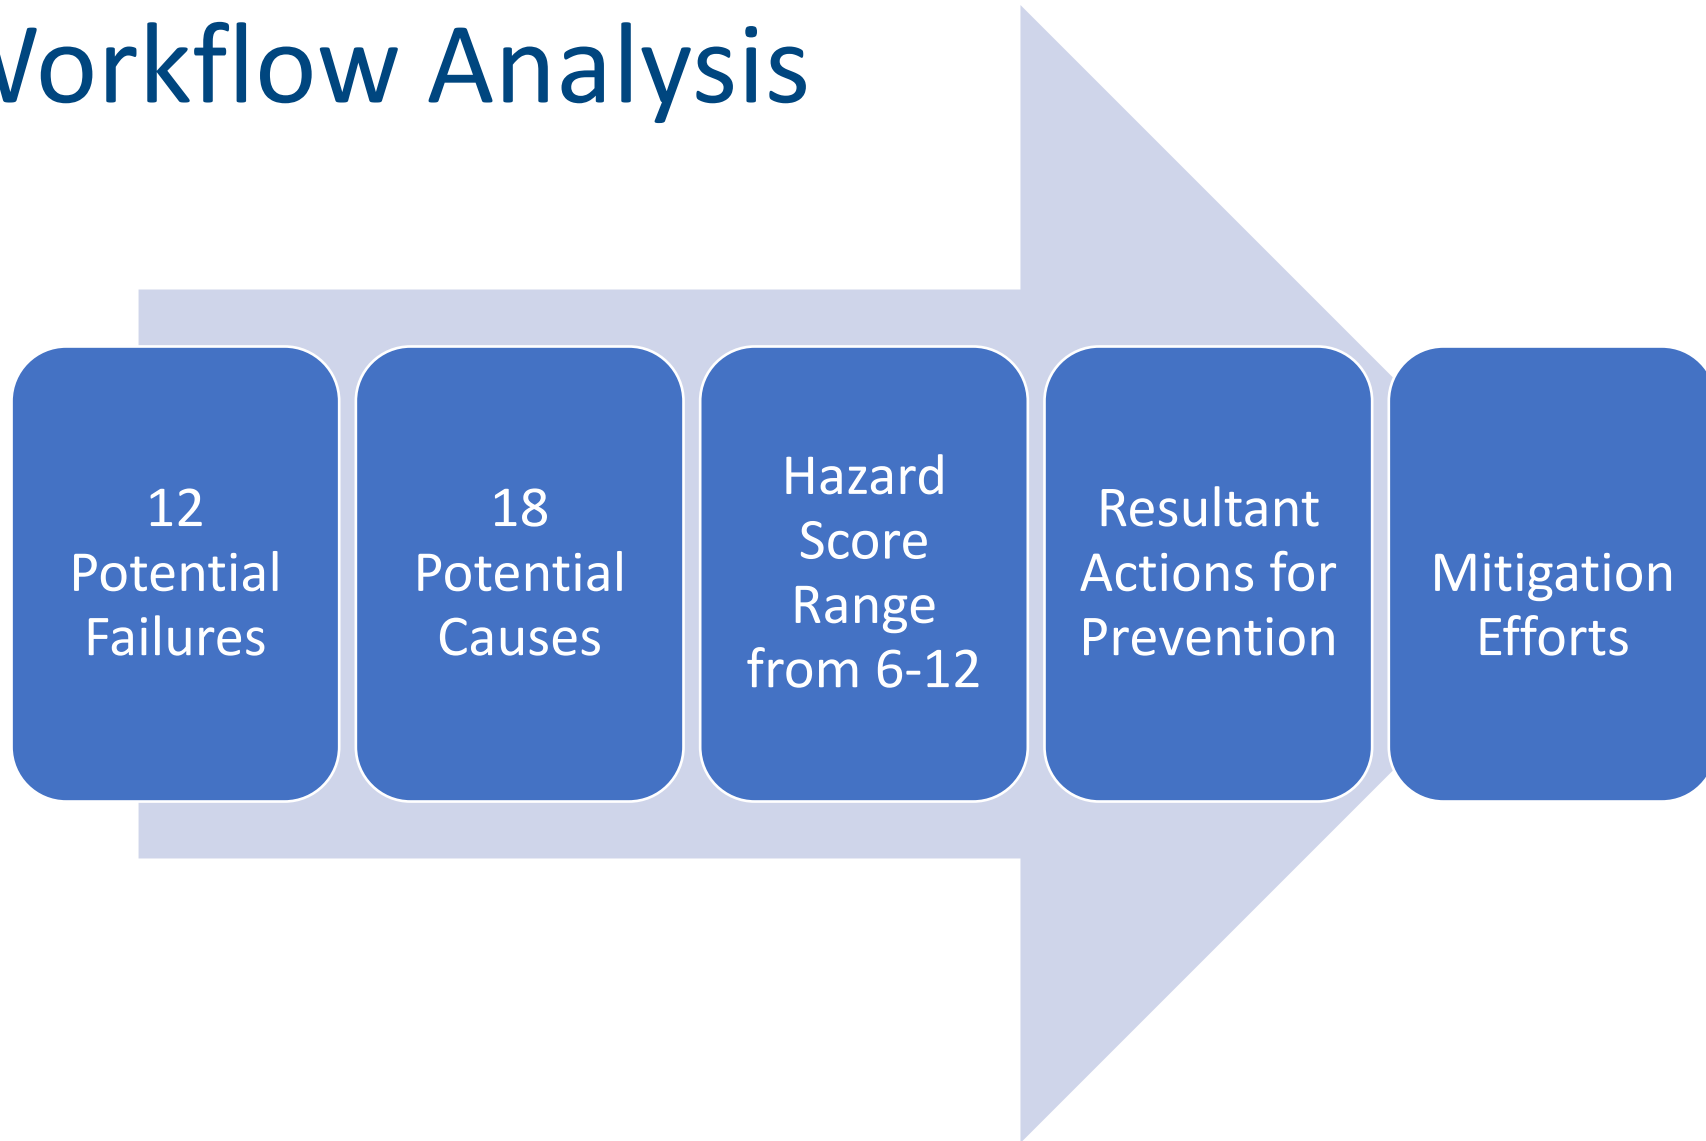

Step 2: Measure whether the action implemented was effective and if any unintended consequences occurred.

HFMEA-Deeper Dive

FMEA ED TeleStroke Workflow

| Hazard Analysis | | | | | | | | | | Identify Actions and Outcomes | | | | |
|--|------------------|---|----------|-------------|-----------|---------------------------|---------------------------------|---------------|----------|---|--|--|---|--|
| Failure Mode | Potential Causes | | Scoring | | | Decision Tree Analysis | | | | Action Type (Eliminate/ Control/ Accept) | Resultant Actions | Outcome Measure | Person Responsible (outcome measurement) | Mitigation Efforts |
| | | | Severity | Probability | Haz Score | Single Point Weakness? | Existing Control Measure? | Detectability | Proceed? | | | | | |
| 1. Stroke order set not entered by ED Physician (or delegate) | 1a | Patient presented initially with other problem, stroke not recognized | 3 | 4 | 12 | Y | N | N | Y | C | ED Physician enters stroke alert order once realized | % stroke alerts placed out of all stroke diagnoses entered | Stroke Team | Training and education on workflow, Training on clinical recognition of when to activate |
| | 1b | Human error, missed step | 3 | 4 | 12 | Y | N | N | Y | C | ED Physician enters stroke alert order once realized | % stroke alerts placed out of all stroke diagnoses entered | Stroke Team | Training and education on workflow |
| | 1c | BN/GSH Stroke order set does not include alert, this | 3 | 4 | 12 | Y | N | N | Y | C | Decision by ED team was to make an individual order for easy | % stroke alerts placed out of all stroke diagnoses | Stroke Team | Training and education |
| 9. TeleStroke call not received by ED Team | 9a | TeleStroke Cart software/hardware failure | 3 | 3 | 9 | Y | N | N | Y | C | ED Physician calls Stroke Physician On-Call using call list | Stroke Physician report | Stroke Team | Regularly occurring equipment checks |
| | 9b | Poor internet connection in ED | 3 | 3 | 9 | Y | N | N | Y | C | ED Physician calls Stroke Physician On-Call using call list | Stroke Physician report | Stroke Team | IS to ensure quality connectivity in ED |
| 10. Audio not working on TeleStroke Cart | 10a | Technology failure | 4 | 3 | 12 | Y | N | N | Y | C | ED Physician calls Stroke Physician On-Call using call list, utilize backup cart | Stroke Physician report | Stroke Team | Regularly occurring equipment checks |
| 11. Camera not working on TeleStroke Cart, Stroke Physician cannot see patient | 11a | Technology failure | 3 | 3 | 9 | Y | N | N | Y | C | ED RN gets backup cart for use | Stroke Physician report | Stroke Team | Regularly occurring equipment checks |
| 12. RN unavailable to perform assessment | 12a | RN is with another patient or otherwise unavailable | 4 | 2 | 8 | Y | N | N | Y | C | Charge Nurse or ED Physician perform exam | Stroke Coordinator report | Stroke Team | |

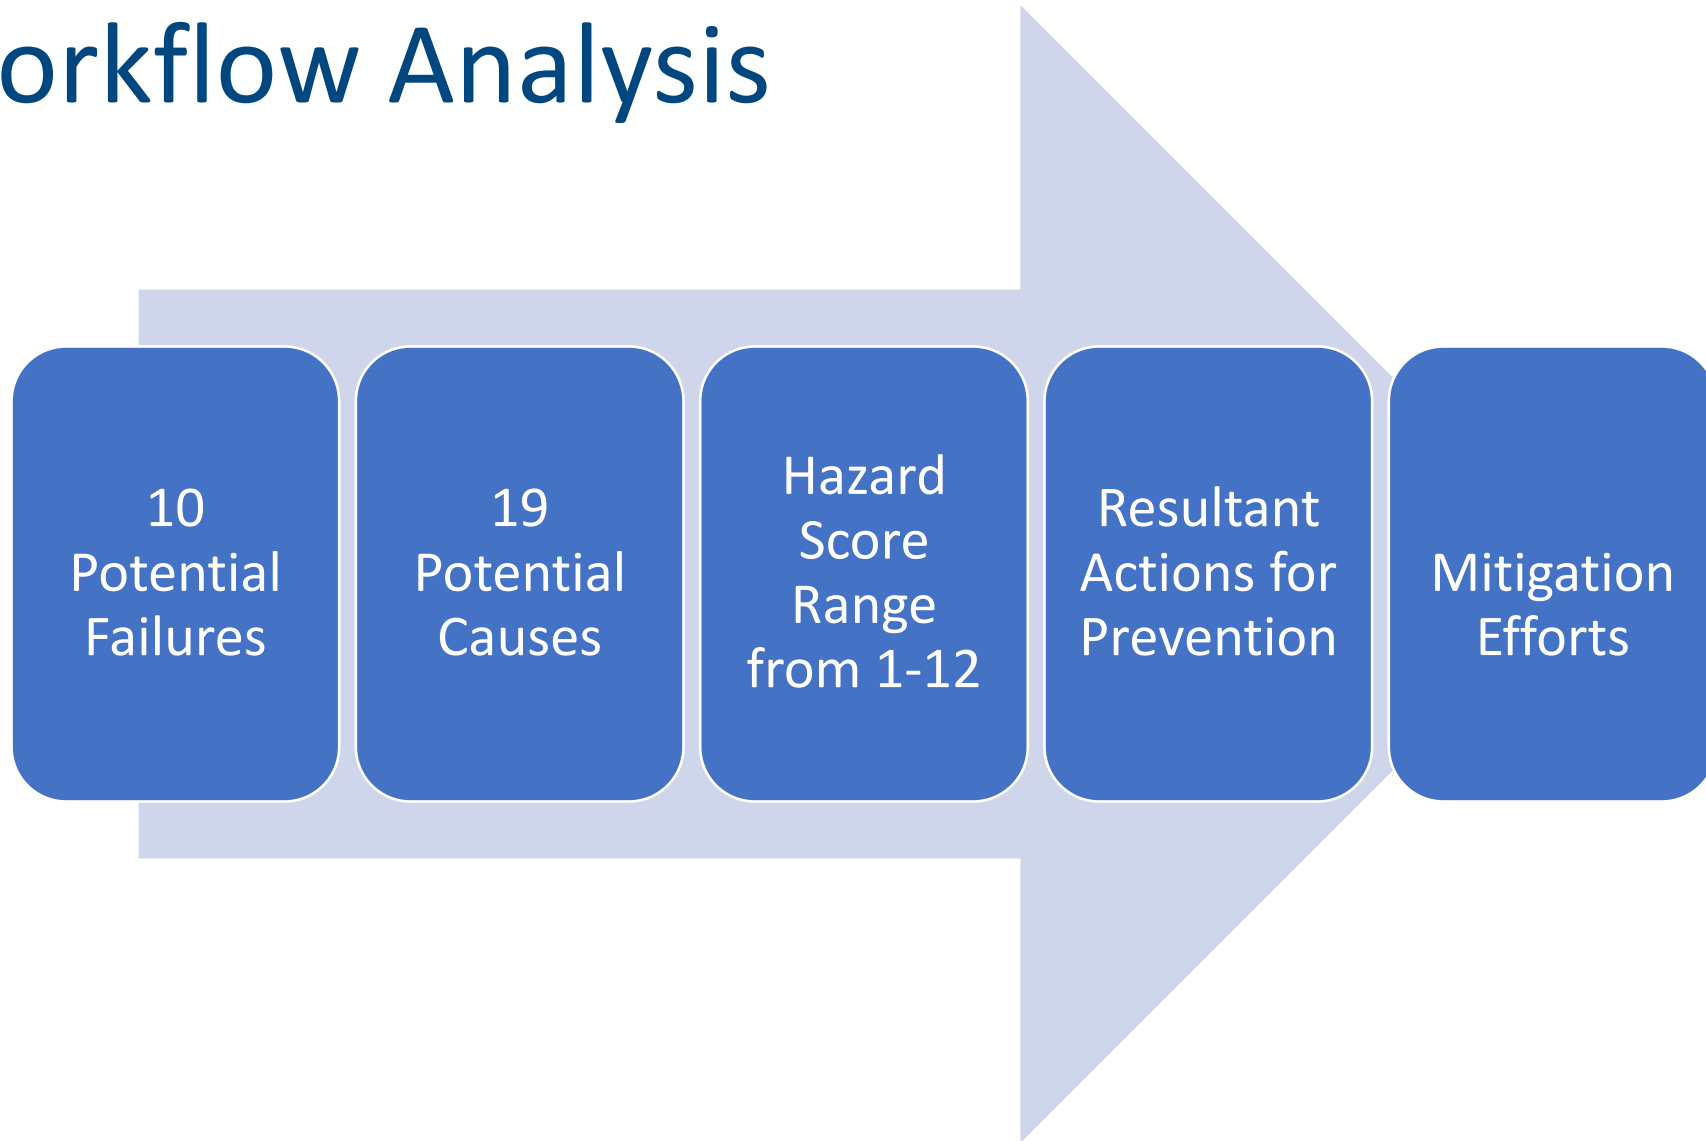

ED Workflow Analysis

FMEA IP TeleStroke Workflow

| Hazard Analysis | | | | | | | | | | Identify Actions and Outcomes | | | | |
|--|------------------|--|----------|-------------|-----------|---------------------------|---------------------------------|---------------|----------|---|---|--------------------------------------|---|--|
| Failure Mode | Potential Causes | | Scoring | | | Decision Tree Analysis | | | | Action Type (Eliminate/ Control/ Accept) | Resultant Actions | Outcome Measure | Person Responsible (outcome measurement) | Mitigation Efforts |
| | | | Severity | Probability | Haz Score | Single Point Weakness? | Existing Control Measure? | Detectability | Proceed? | | | | | |
| 1. Wrong alert is called | 1a | Miscommunication from Charge Nurse to Unit Clerk or CN or designee | 2 | 2 | 4 | Y | N | Y | Y | C | Intensive care responder calls Security and provides complete information | IRIS report | Unit manager | Training and education on workflow |
| | 1b | Information breakdown from Unit Clerk to Security | 2 | 2 | 4 | Y | N | Y | Y | C | Intensive care responder calls Security and provides complete information | IRIS report | Unit manager | Training and education on workflow |
| 2. Alert is called in to wrong location | 2a | Unit Clerk/CN/RN/designee does not provide location to Security | 2 | 2 | 4 | Y | N | Y | Y | C | Unit Clerk/CN/RN/designee calls Security and provides complete information | IRIS report | Unit manager | Training and education on workflow |
| 3. Response team does not receive IP Stroke Alert | 3a | Voalte failure | 2 | 2 | 4 | Y | N | Y | Y | C | Do overhead (in house) (GSH/BN 7am-5pm and BBH/MHMH 24/7), call STANSE physician on call cell | IRIS report | Unit manager | |
| | 3b | ICU Charge Nurse not signed in to role | 1 | 1 | 1 | Y | N | Y | Y | C | House supervisor calls Charge Nurse | IRIS report | Unit manager | Training and education on workflow |
| 4. Stroke Physician | 4a | Voalte failure | 2 | 3 | 6 | Y | N | Y | Y | C | Do overhead (in house) (GSH/BN 7am-5pm and BBH/MHMH 24/7), call STANSE physician on call cell | IRIS report | Unit manager | Stroke physician |
| 7. Stroke Physician unable to place video call to TeleStroke cart | 7a | Stroke Physician technology or equipment failure | 3 | 4 | 12 | Y | N | Y | Y | C | Stroke Physician calls inpatient unit to connect with inpatient team | IRIS report | Stroke Team | Regularly occurring equipment checks, test calls |
| | 7b | Stroke Physician internet connection failure | 3 | 4 | 12 | Y | N | Y | Y | C | Stroke Physician calls inpatient unit to connect with inpatient team | Stroke Physician report, IRIS Report | Stroke Team | Regularly occurring equipment checks, test calls |
| 8. TeleStroke call not received by IP Team | 8a | TeleStroke Cart software/ hardware failure | 3 | 3 | 9 | Y | N | Y | Y | C | Stroke Physician calls inpatient unit to connect with inpatient team | IRIS report | Unit manager | Regularly occurring equipment checks |
| | 8b | Poor internet connection on inpatient unit | 3 | 3 | 9 | Y | N | Y | Y | C | Stroke Physician calls inpatient unit to connect with inpatient team | IRIS report | Unit manager | IS to ensure quality connectivity in ED |
| 9. Audio not working on TeleStroke Cart | 9a | Technology failure | 4 | 3 | 12 | Y | N | Y | Y | C | Stroke Physician calls inpatient unit to connect with inpatient team, utilize backup cart | IRIS report | Unit manager | Regularly occurring equipment checks |
| 10. Camera not working on TeleStroke Cart, Stroke Physician cannot see patient | 10a | Technology failure | 3 | 3 | 9 | Y | N | Y | Y | C | Inpatient RN gets backup cart for use | IRIS report | Unit manager | Regularly occurring equipment checks |

IP Workflow Analysis

Accomplishments

- Selection of Telestroke Platform (Teladoc)-Equipment arrived 12/29/23
- Training protocols for Clinical Team are completed
- Dedicated space established for Telestroke encounters
- Training schedule for clinical team members established
- STANSE responding to all stroke alerts from 7-5, 7 days a week successfully.

Key Dates for implementation
